PROFESSIONAL SUMMARY

Engineer with **4+ years** spanning QA automation, device validation, and full-stack development. Currently building and testing AI-driven products at CosX, where I write automated test suites in **Playwright** with scheduled **GitHub Actions** pipelines, develop frontend features in **Next.js**, and work through the command line with **AI-assisted tooling (Claude)** to author tests and debug faster. Earlier experience covers web and mobile application testing, IoT and AR/VR validation, and telecom device certification against BIS standards.

TECHNICAL SKILLS

- **Test Automation:** Playwright (Python), Selenium WebDriver, Selenium IDE, Apache JMeter (load & performance)
- **CI/CD & Version Control:** GitHub Actions (scheduled automated test runs), Jenkins, Git, GitHub
- **Frontend Development:** Next.js, React.js, JavaScript, HTML5, CSS3, Bootstrap
- **Languages:** Python, JavaScript, SQL, Java (basic)
- **QA Practices:** Functional, Regression, Sanity, End-to-End, UAT, Test Case Design & Execution, Defect Lifecycle Management, Cross-Browser Testing
- **AI-Assisted Development:** Claude (CLI-based AI-assisted development — test script generation, debugging, code review), prompt engineering for development workflows
- **Current Domain Focus:** AI-driven web application testing, web & mobile application testing, API testing, frontend development (Next.js, React) & UI defect resolution
- **Prior Domain Experience:** IoT testing, AR/VR testing, modem & telecom testing (5G SA/NSA, 4G, 3G, 2G), BIS certification
- **Tools & Platforms:** Postman (API testing), Jira, MySQL, Linux/Bash command line (CLI), VS Code, PyCharm
- **Design:** Adobe Photoshop, Canva

PROFESSIONAL EXPERIENCE

CosX (CosxLive Technologies) | Artificial Intelligence Engineer

Jan 2026 - Present | Bengaluru, India (Remote)

- Own **end-to-end quality** for AI-driven products — designing and executing test protocols, documenting defects, and tracking them through to closure alongside the development team.
- Build and maintain automated regression suites in **Playwright**, scheduled to run daily through **GitHub Actions** so failures surface without anyone triggering a run.
- Develop frontend features in **Next.js and React**, then diagnose and fix UI defects directly — closing the dev-QA loop without handoff delay and improving interface stability.
- Work primarily through the **command line**, using **Claude (CLI)** for AI-assisted development — generating and refining Playwright test scripts, debugging failing runs, and reviewing code before it reaches the repository.
- Monitor application performance and system reliability, flagging degradation before it reaches production users.
- Translate business requirements into **testable acceptance criteria** in collaboration with product and engineering.

Techeunoia International Pvt Ltd | Full Stack Developer & Tester

Sep 2024 - Jul 2025

- Built the frontend for a commercial **SaaS Office & Inventory Management platform** using React.js, HTML, CSS, and Bootstrap — shipped for both internal use and external sale.

- Designed and maintained **Selenium WebDriver** automation scripts, cutting manual regression cycles and freeing QA time for exploratory testing.
- Ran functional, regression, and **performance testing with Apache JMeter** across multiple client deployments to validate stability under load.
- Led QA for client projects including **Indian Oil and Alvista**, taking deliverables through to UAT sign-off against stringent acceptance criteria.
- Used development context to root-cause defects faster and advocate for a more testable codebase, reducing back-and-forth between dev and QA.

Marquis Technology Pvt. Ltd | Testing Engineer

Jan 2022 - Jul 2024

- Led end-to-end validation for **mobile devices, Smart TVs, and IoT equipment** across functional, stability, modem, feature, sanity, and field testing.
- Validated device performance on **5G (SA/NSA), 4G, 3G, and 2G**, including Carrier Aggregation, CSFB, SRVCC, and handover procedures.
- Root-caused and reported high-impact defects including call drops, call-forwarding failures, conference-call faults, and system crashes.
- Conducted **BIS (Bureau of Indian Standards) lab certification** against IS 13252, IS 616, and IS 16242 plus environmental standards, clearing devices for market release.
- Operated diagnostic and flashing toolchains: MSM Tool, SP Flash Tool, G NET Tracker, PicoScope6, PW Communicator, ISM Pro, and Modemage.

EDUCATION

B.Tech, Electronics & Communication Engineering | Raja Balwant Singh Engineering Technical Campus, Agra | 2018 - 2022

CERTIFICATIONS & WORKSHOPS

- **Python with Playwright** | Uncodemy Edutech Pvt. Ltd. | 3-month training programme, completed July 2026 | Certified by Skill India, NASSCOM & FutureSkills Prime (MeitY)
- **Python Full Stack Development** | Ducat Institute, Noida | 2023 - 2024
- **Selenium Automation Testing** | Internshala
- **Technical Workshops:** ADRDE (DRDO), 509 Army Base Workshop, Indian Railways

ADDITIONAL

Languages: Hindi, English

Interests: Graphic design & image editing, tech community events, playing guitar
